Automation Execution Report

Run ID: run_20261026_150215_detailed

Environment: Approved local non-production **Browser:** chromium (Playwright)

Date: 2026-10-26 15:11:26 IST

Execution Summary

Total Scenarios	Passed	Failed	Skipped	Success Rate
19	12	1	6	63.16%

Execution Metadata

Start	2026-10-26 15:02:15 IST	**End**	2026-10-26 15:11:26 IST
Duration	00:09:11	**Target**	Approved local environment
Scope	Owned synthetic data and permitted read-only observation. Restricted modules and payment/send/allocation/settlement controls are excluded.		

Module Summary

Module	Total	Passed	Failed	Skipped	Result
Billing	4	4	0	0	PASS
Calendar & Court	3	2	0	1	SKIP
Companies & Matters	4	4	0	0	PASS
Documents & Templates	3	1	1	1	FAIL
Read-only Administration	4	0	0	4	SKIP
Tasks	1	1	0	0	PASS

Scenario Register

Scenario	Outcome	Duration	Scope
administratorAddsOwnedSecondTenantToOwnedMatter Administrator adds a fully populated second tenant to an owned Matter.	PASS	00:00:18	Companies & Matters
administratorBuildsOwnedPortfolioHierarchy Administrator creates two Properties, three Matters, a Task, and an Event under one owned Company.	PASS	00:00:45	Companies & Matters
administratorCreatesOwnedInvoiceDraftFromOwnedTime Administrator creates and verifies an owned invoice draft from owned billable time.	PASS	00:00:18	Billing
administratorEditsOwnedHierarchy Edit an owned Company contact role, Property unit count and Matter priority, then verify persistence and unchanged lineage.	PASS	00:00:28	Companies & Matters

Scenario	Outcome	Duration	Scope
administratorGeneratesOwnedVariableDocument Generate an owned Word document and verify a custom variable is replaced in its downloaded XML.	SKIP	00:00:00	Documents & Templates
administratorMaintainsOwnedCourtUpdate Administrator creates, edits, verifies, and deletes an owned Court Update from an owned calendar Event.	PASS	00:00:22	Calendar & Court
administratorMaintainsOwnedDocumentTemplateMetadata Administrator creates, uploads, edits, and downloads an owned document template without generation or billing side effects.	FAIL	00:00:36	Documents & Templates
administratorMaintainsOwnedEvent Administrator maintains an owned calendar Event and its Court Updates propagation.	PASS	00:00:27	Calendar & Court
administratorMaintainsOwnedExpenseLifecycle Administrator manages an owned expense only for a newly-created owned Matter.	PASS	00:00:30	Billing
administratorMaintainsOwnedTask Administrator maintains an owned Matter task without touching existing tasks.	PASS	00:00:21	Tasks
administratorManagesOwnedMatterDocumentLifecycle Administrator manages an owned Matter document without portal, email, timeline, or note side effects.	PASS	00:00:27	Documents & Templates
administratorManagesOwnedMatterNoteLifecycle Administrator manages a note only on a newly-created owned Matter.	PASS	00:00:19	Companies & Matters
administratorManagesOwnedTimeEntryLifecycle Administrator manages a billing time entry only for a newly-created owned Matter.	PASS	00:00:22	Billing
administratorSeesUpdatedOwnedTimeEntryInDraftInvoice Updated owned time entry is reloaded and reflected in its owned draft invoice.	PASS	00:00:21	Billing
calendarViewsAndFilterContractsAreReadOnly Calendar views and filters can be observed without opening, creating, or changing events.	SKIP	00:00:00	Calendar & Court
reportsTabsAndFiltersRemainReadOnly Reports are observed after approved sensitive-access setup without generating, exporting, sending, or opening record actions.	SKIP	00:00:00	Read-only Administration
searchAndFilterContractsAreReadOnly Company and task searches return empty results for a unique no-match query and reset safely.	SKIP	00:00:00	Read-only Administration
settingsRemainObservationOnly Settings destinations are observed without opening restricted configuration controls.	SKIP	00:00:00	Read-only Administration
workflowContractsAreObservationOnly Workflow contracts are observed without choosing triggers/actions, toggling workflows, or saving a workflow.	SKIP	00:00:00	Read-only Administration

Scenario Details

These results cover the executed scenarios in this run. The success rate is an execution metric; full Raddatz functional coverage has not been established. Steps below describe the implemented workflow; individual step timestamps are not recorded.

Multiple tenants on one Matter PASS

Module: Companies & Matters **Type:** Positive lifecycle **Duration:** 00:00:18

Preconditions: Fresh owned Company and Property exist.

Test Steps:

1. Open Create Matter
2. Populate two tenants on one Matter
3. Save the Matter
4. Verify both tenants in the case-scoped grid row

Expected Result: The Matter retains both populated tenants.

Actual Result: All implemented assertions completed: The Matter retains both populated tenants.

Failure classification: None recorded

Evidence: TestNG method administratorAddsOwnedSecondTenantToOwnedMatter; underlying TestNG and Extent results retained with the source execution.

Owned multi-property hierarchy PASS

Module: Companies & Matters **Type:** Positive lifecycle **Duration:** 00:00:45

Preconditions: Approved local target; fresh automation-owned data.

Test Steps:

1. Create one Company
2. Add two Properties under that Company
3. Create three Matters under the intended Properties
4. Verify grid lineage and create linked Task/Event

Expected Result: One Company has the expected Properties and Matters with correct row lineage.

Actual Result: All implemented assertions completed: One Company has the expected Properties and Matters with correct row lineage.

Failure classification: None recorded

Evidence: TestNG method administratorBuildsOwnedPortfolioHierarchy; underlying TestNG and Extent results retained with the source execution.

Draft invoice from owned time PASS

Module: Billing **Type:** Positive lifecycle **Duration:** 00:00:18

Preconditions: Fresh owned Matter and billable time exist.

Test Steps:

1. Open Draft Invoices
2. Create draft for owned Matter/date
3. Verify source row, totals, preview, and local PDF
4. Do not send or allocate payment

Expected Result: Draft contains only the expected owned time source and local PDF is valid.

Actual Result: All implemented assertions completed: Draft contains only the expected owned time source and local PDF is valid.

Failure classification: None recorded

Evidence: TestNG method administratorCreatesOwnedInvoiceDraftFromOwnedTime; underlying TestNG and Extent results retained with the source execution.

Company, Property, and Matter update persistence PASS

Module: Companies & Matters **Type:** Positive lifecycle **Duration:** 00:00:28

Preconditions: Fresh owned hierarchy exists.

Test Steps:

1. Open each owned edit route
2. Update the permitted Company, Property, and Matter fields
3. Reload and reopen each record
4. Verify the revised values and unchanged lineage

Expected Result: Each permitted update survives server reload and remains linked to the owned hierarchy.

Actual Result: All implemented assertions completed: Each permitted update survives server reload and remains linked to the owned hierarchy.

Failure classification: None recorded

Evidence: TestNG method administratorEditsOwnedHierarchy; underlying TestNG and Extent results retained with the source execution.

Document variable generation SKIP

Module: Documents & Templates **Type:** Positive lifecycle **Duration:** 00:00:00

Preconditions: Owned template, Matter, and controlled DOCX token exist.

Test Steps:

1. Create template with custom variable
2. Generate document for owned Matter
3. Download output
4. Inspect Word XML for substituted value

Expected Result: The custom variable is substituted and raw token is absent from output.

Actual Result: Scenario stopped before all expected checks completed. Later steps have not been verified.

Failure classification: com.microsoft.playwright.TimeoutError (cause requires triage; exception content omitted)

Evidence: TestNG method administratorGeneratesOwnedVariableDocument; underlying TestNG and Extent results retained with the source execution.

Court Update lifecycle PASS

Module: Calendar & Court **Type:** Positive lifecycle **Duration:** 00:00:22

Preconditions: Fresh owned Event and Matter exist.

Test Steps:

1. Verify event on Court Updates date
2. Create Court Update
3. Edit notes and reload
4. Delete exact owned update

Expected Result: The owned Court Update persists and is removed without billing handoff.

Actual Result: All implemented assertions completed: The owned Court Update persists and is removed without billing handoff.

Failure classification: None recorded

Evidence: TestNG method administratorMaintainsOwnedCourtUpdate; underlying TestNG and Extent results retained with the source execution.

Document Template metadata lifecycle FAIL

Module: Documents & Templates **Type:** Positive lifecycle **Duration:** 00:00:36

Preconditions: Controlled DOCX fixture exists.

Test Steps:

1. Create owned template and custom variable
2. Upload source document
3. View, download, edit, and reopen metadata
4. Delete exact owned template

Expected Result: Owned template metadata and variable persist without generation or billing side effects.

Actual Result: Scenario stopped before all expected checks completed. Later steps have not been verified.

Failure classification: com.microsoft.playwright.TimeoutError (cause requires triage; exception content omitted)

Evidence: TestNG method administratorMaintainsOwnedDocumentTemplateMetadata; underlying TestNG and Extent results retained with the source execution.

Event update and downstream propagation PASS

Module: Calendar & Court **Type:** Positive lifecycle **Duration:** 00:00:27

Preconditions: Fresh owned Matter exists.

Test Steps:

1. Create an owned Event
2. Verify Calendar and Court Updates visibility
3. Edit title and notes
4. Verify revised Calendar card, then delete

Expected Result: The revised Event propagates to permitted consumers and is absent after deletion.

Actual Result: All implemented assertions completed: The revised Event propagates to permitted consumers and is absent after deletion.

Failure classification: None recorded

Evidence: TestNG method administratorMaintainsOwnedEvent; underlying TestNG and Extent results retained with the source execution.

Expense lifecycle PASS

Module: Billing **Type:** Positive lifecycle **Duration:** 00:00:30

Preconditions: Fresh owned Matter and billing session exist.

Test Steps:

1. Create owned Expense
2. Edit description
3. Reopen after reload and verify revised value
4. Delete the owned Expense

Expected Result: The owned Expense persists after update and is removed safely.

Actual Result: All implemented assertions completed: The owned Expense persists after update and is removed safely.

Failure classification: None recorded

Evidence: TestNG method administratorMaintainsOwnedExpenseLifecycle; underlying TestNG and Extent results retained with the source execution.

Owned Task lifecycle PASS

Module: Tasks **Type:** Positive lifecycle **Duration:** 00:00:21

Preconditions: Fresh owned Matter exists.

Test Steps:

1. Create an owned Task
2. Find it in To-dos
3. Edit title and description
4. Reload, search by revised title, and delete

Expected Result: Only the owned Task is updated, persisted, and removed.

Actual Result: All implemented assertions completed: Only the owned Task is updated, persisted, and removed.

Failure classification: None recorded

Evidence: TestNG method administratorMaintainsOwnedTask; underlying TestNG and Extent results retained with the source execution.

Matter Document lifecycle PASS

Module: Documents & Templates **Type:** Positive lifecycle **Duration:** 00:00:27

Preconditions: Fresh owned Matter and controlled fixture exist.

Test Steps:

1. Upload controlled document
2. Verify listing and view affordance
3. Download local artifact
4. Delete the exact owned document

Expected Result: The owned document is managed without portal, email, or publishing actions.

Actual Result: All implemented assertions completed: The owned document is managed without portal, email, or publishing actions.

Failure classification: None recorded

Evidence: TestNG method administratorManagesOwnedMatterDocumentLifecycle; underlying TestNG and Extent results retained with the source execution.

Matter Note lifecycle PASS

Module: Companies & Matters **Type:** Positive lifecycle **Duration:** 00:00:19

Preconditions: Fresh owned Matter exists.

Test Steps:

1. Create an owned Note
2. Edit its content
3. Reload and verify revised content
4. Delete the same note

Expected Result: The owned Note persists after update and is removed only by its scoped delete.

Actual Result: All implemented assertions completed: The owned Note persists after update and is removed only by its scoped delete.

Failure classification: None recorded

Evidence: TestNG method administratorManagesOwnedMatterNoteLifecycle; underlying TestNG and Extent results retained with the source execution.

Time Entry lifecycle PASS

Module: Billing **Type:** Positive lifecycle **Duration:** 00:00:22

Preconditions: Fresh owned Matter and billing session exist.

Test Steps:

1. Create owned billable time
2. Edit its description
3. Reload Time Entry grid
4. Delete the revised owned row

Expected Result: The owned entry persists after reload and no payment controls are used.

Actual Result: All implemented assertions completed: The owned entry persists after reload and no payment controls are used.

Failure classification: None recorded

Evidence: TestNG method administratorManagesOwnedTimeEntryLifecycle; underlying TestNG and Extent results retained with the source execution.

Time update to invoice propagation PASS

Module: Billing **Type:** Positive lifecycle **Duration:** 00:00:21

Preconditions: Fresh owned Matter and billing session exist.

Test Steps:

1. Create and update owned time
2. Reload the billing grid
3. Create an owned draft invoice
4. Verify revised bill note in the invoice source row

Expected Result: The draft consumes the server-persisted revised Time Entry.

Actual Result: All implemented assertions completed: The draft consumes the server-persisted revised Time Entry.

Failure classification: None recorded

Evidence: TestNG method administratorSeesUpdatedOwnedTimeEntryInDraftInvoice; underlying TestNG and Extent results retained with the source execution.

Calendar read-only contracts SKIP

Module: Calendar & Court **Type:** Read-only observation **Duration:** 00:00:00

Preconditions: Approved read-only session.

Test Steps:

1. Open Calendar
2. Verify view controls and filters
3. Switch permitted views
4. Do not create or edit events

Expected Result: Calendar navigation/filter contracts are available without data mutation.

Actual Result: Scenario stopped before all expected checks completed. Later steps have not been verified.

Failure classification: com.microsoft.playwright.TimeoutError (cause requires triage; exception content omitted)

Evidence: TestNG method calendarViewsAndFilterContractsAreReadOnly; underlying TestNG and Extent results retained with the source execution.

Reports read-only contracts SKIP

Module: Read-only Administration **Type:** Read-only observation **Duration:** 00:00:00

Preconditions: Approved sensitive-access setup.

Test Steps:

1. Open permitted Reports shell
2. Verify tabs and filters
3. Do not generate, export, send, or open record actions

Expected Result: Report controls are observed without changing data.

Actual Result: Scenario stopped before all expected checks completed. Later steps have not been verified.

Failure classification: com.microsoft.playwright.TimeoutError (cause requires triage; exception content omitted)

Evidence: TestNG method reportsTabsAndFiltersRemainReadOnly; underlying TestNG and Extent results retained with the source execution.

Search and filter contracts SKIP

Module: Read-only Administration **Type:** Read-only observation **Duration:** 00:00:00

Preconditions: Approved read-only session.

Test Steps:

1. Run unique no-match searches
2. Verify empty state
3. Reset search and filters
4. Do not change records

Expected Result: Search and reset contracts behave without data mutation.

Actual Result: Scenario stopped before all expected checks completed. Later steps have not been verified.

Failure classification: com.microsoft.playwright.TimeoutError (cause requires triage; exception content omitted)

Evidence: TestNG method searchAndFilterContractsAreReadOnly; underlying TestNG and Extent results retained with the source execution.

Settings boundary observation SKIP

Module: Read-only Administration **Type:** Read-only observation **Duration:** 00:00:00

Preconditions: Approved read-only session.

Test Steps:

1. Open Settings menu
2. Verify destination visibility
3. Do not enter restricted configuration controls

Expected Result: Settings navigation is observed while restricted controls remain untouched.

Actual Result: Scenario stopped before all expected checks completed. Later steps have not been verified.

Failure classification: com.microsoft.playwright.TimeoutError (cause requires triage; exception content omitted)

Evidence: TestNG method settingsRemainObservationOnly; underlying TestNG and Extent results retained with the source execution.

Workflow boundary observation SKIP

Module: Read-only Administration **Type:** Read-only observation **Duration:** 00:00:00

Preconditions: Approved read-only session.

Test Steps:

1. Open Workflow list and blank creation form
2. Verify visible trigger/action contracts
3. Do not choose, toggle, or save

Expected Result: Workflow contracts are observed without changing workflow behavior.

Actual Result: Scenario stopped before all expected checks completed. Later steps have not been verified.

Failure classification: com.microsoft.playwright.TimeoutError (cause requires triage; exception content omitted)

Evidence: TestNG method workflowContractsAreObservationOnly; underlying TestNG and Extent results retained with the source execution.

Coverage Gaps and Exclusions

The suite currently combines lifecycle checks into 19 methods. A passing method confirms only its implemented assertions. No per-field, per-action, or full-application coverage percentage has been established.

- Pending: event date/time rescheduling and verification across all consumers; Expense-to-Invoice propagation; additional status and edit paths.
- Pending: negative and boundary submissions, unsupported document validation, broader search combinations, and PWA offline/responsive behavior.
- Known limitations: existing-Matter additional-tenant persistence and unavailable inline Word editor.
- Observation only: workflow forms, Settings menu, and Reports tabs/filters. These do not constitute full functional tests of those modules.
- Excluded: integrations, backend controls, portal publishing/access, permissions, bulk/import/export, external messaging, and payment/settlement.
